

# webpack MODULE BUNDLER

### 以前

- <script src="a.js"></script>
- <script src="b.js"></script>
- <script src="c.js"></script>
- <script src="e.js"></script>
- <script src="f.js"></script>

### 规范和模块化

#### AMD/CMD

```
require(['jquery', 'underscore', 'backbone'], function ($, _, Backbone){
```

})

- 1. 依赖前置, 预先执行
- 2. 支持异步

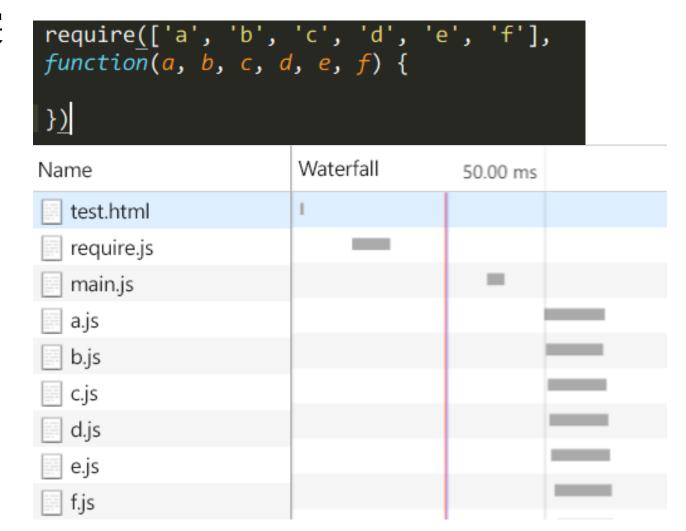

```
Sea.js
```

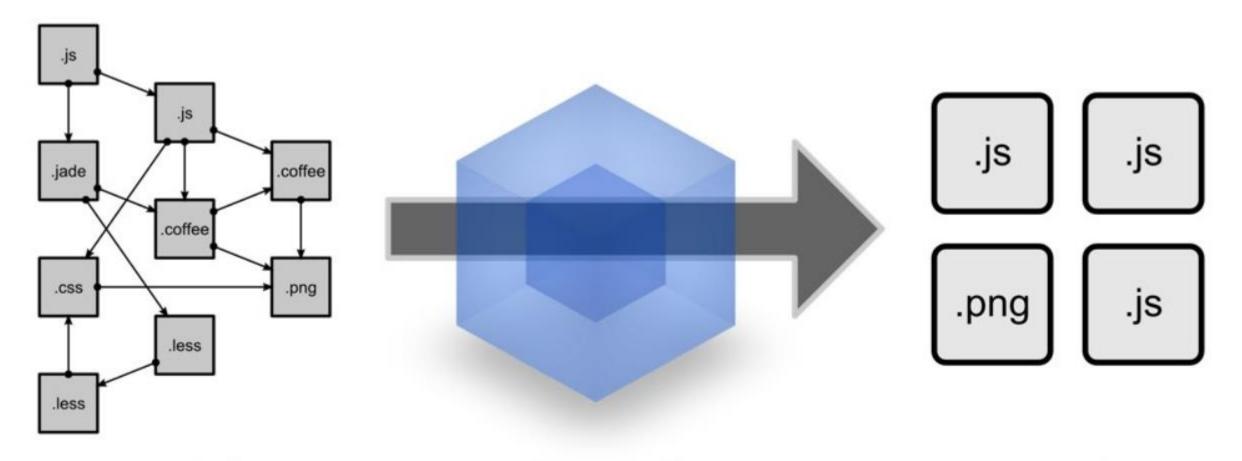

```
define(function(require, exports, module) {
  var $ = require('jquery')
  var _ = require('underscore')
  var Backbone = require('backbone')
})
```

- 1. 依赖就近, 延迟执行
- 2. 节省资源

#### 存在问题

- 1. 合并请求和按需加载的冲突
- 2. 需要加载require.js文件
- 3. Others?

modules with dependencies

webpack MODULE BUNDLER

static assets

#### Hello world

#### 编写代码

```
// app.js
import bar from './bar';
bar();

// bar.js
export default function bar() {
    //
}
```

#### 使用 webpack 打包

```
// webpack.config.js
module.exports = {
  entry: './app.js',
  output: {
    filename: 'bundle.js'
  }
};
```

#### Html

```
<script src="bundle.js"></script>
```

#### entry and output

```
// @webpack.config.js
module.exports = {
                           entry: String | [String] | Object | (() => {})
  entry: {},
                           entry: {
  output: {},
                             app: './src/main.js'
  module: {
    rules: [
                           output: {
                             path: path.resolve(__dirname, 'dist'),
                             filename: 'bundle.js'/ '[name].[hash].[id].[chunkhash].js',
  plugins: [],
                             chunkFilename: '[id].[chunkhash].js',
  externals: [],
                             publicPath: "/"
                           },
  resolve: {},
  devtool: ',
```

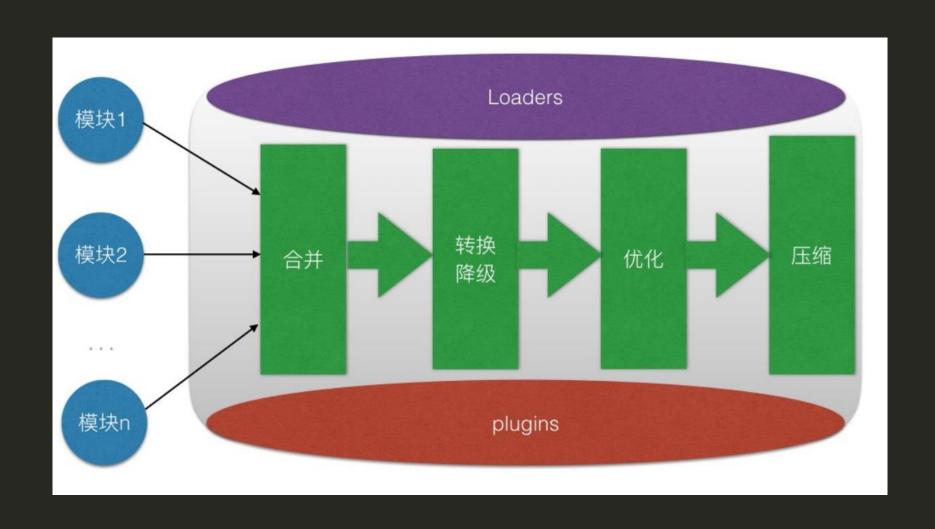

#### loader - 幕后功臣

```
// @webpack.config.js
module.exports = {
                           条件 + 结果 + 嵌套
  entry: {},
  output: {},
                            test: /\.js$/,
  module: {
                            loader: 'babel-loader',
                            include: [resolve('src'), resolve('test')]
    rules: [
                            test: /\.(png|jpe?g|gif|svg)(\?.*)?$/,
                            loader: 'url-loader',
  plugins: [],
                            query: {
  externals: [],
                              limit: 10000,
                              name: utils.assetsPath('img/[name].[hash:7].[ext]')
  resolve: {},
  devtool: ',
```

#### plugins - 庞大

```
// @webpack.config.js
module.exports = {
                           文件优化
  entry: {},
  output: {},
                           new webpack.optimize.CommonsChunkPlugin({
                             name: ['vendor', 'manifest'],
  module: {
                           }),
    rules: [
                           new HtmlWebpackPlugin({
                             filename: 'index.html',
                             template: 'index.prod.html',
                           }),
                           new webpack.optimize.UglifyJsPlugin({
  plugins: []
                             compress: {
  externals: [],
                               warnings: false,
  resolve: {},
                           }),
  devtool: ',
```

### 模块处理

#### 其他

```
// @webpack.config.js
module.exports = {
  entry: {},
  output: {},
  module: {
    rules: [
  plugins: [],
  externals: {},
  resolve: {},
  devtool: ",
```

```
externals: 防止模块被打包
externals: {
 jquery: 'jQuery'
// @index.prod.html
<script src="https://code.jquery.com/jquery-3.1.0.js"</pre>
integrity="sha256-slogkvB1K3V0kzAI8QITxV3Vzp0nkeNVsKvtkYLMjfk="
crossorigin="anonymous"></script>
resolve: (解析) 后缀,模块路径等
devtool: 开发专用~
其他: devServer, context 等等
```

#### NPM - 依赖管理

• 55w+ 个模块

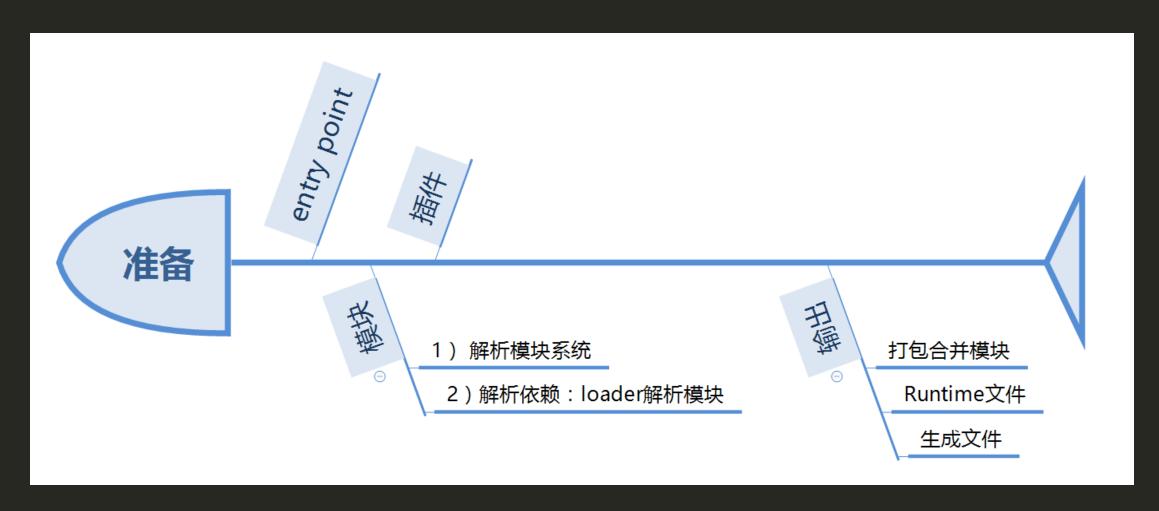

- Npm init配置package.json文件
- Npm install安装依赖

```
"scripts": {
  "dev": "node build/dev-server.js",
  "build": "node build/build.js"
"dependencies": {
  "vonic": "^2.0.0-beta.14",
  "vuex": "^2.3.0"
},
"devDependencies": {
  "autoprefixer": "^6.7.2",
  "babel-core": "^6.22.1",
  "babel-loader": "^6.2.10",
```

### 扩展部分

[2/2]

#### 模块系统

#### ES6模块

```
import '...'
    import abc from '....'
    import { abc, cba } from '...'
    import * as abc from '...'
    import { cba as abc } from '...'
    export let a = 1
    export default class Person extends Component {}
CMD: var a = require('a')
AMD: require(['a'], function(a) { })
manifest.js: __webpack_require__
```

### runtime与manifest, CommonsChunkPlugin

```
output:
                               path: '/dist',
                               filename: 'js/[name].[chunkhash].js',
          Vendor
                               chunkFilename: 'js/[id].[chunkhash].js'
runtime: 连接模块代码,
                                          webpackJsonp, __webpack_require__
manifest:
                       "app.css": "cfld static/css/app.78b2a68d400f1bfd4aded542b436d03a.css",
                       "app.css.map": "cfld static/css/app.78b2a68d400f1bfd4aded542b436d03a.css.map",
                       "app.js": "cfld_static/js/app.4a79c23b98ccb38da3ad.js",
                       "app.js.map": "cfld_static/js/app.4a79c23b98ccb38da3ad.js.map",
                       "manifest.js": "cfld static/js/manifest.7d4a07e3079f8d188760.js",
                       "manifest.js.map": "cfld static/js/manifest.7d4a07e3079f8d188760.js.map",
                       "vendor.js": "cfld static/js/vendor.d9b009f72a0461349f5c.js",
                       "vendor.js.map": "cfld_static/js/vendor.d9b009f72a0461349f5c.js.map"
```

```
Asset Size Chunks Chunk Names cfld_static/js/app.4a79c23b98ccb38da3ad.js 113 kB 0 [emitted] app cfld_static/js/vendor.d9b009f72a0461349f5c.js 32.8 kB 1 [emitted] vendor cfld_static/js/manifest.7d4a07e3079f8d188760.js 6 kB 2 [emitted] manifest ic/css/app.78b2a68d400f1bfd4aded542b436d03a.css 25.2 kB 0 [emitted] app
```

### 简单的webpack

- 1. 分析模块依赖关系esprima
- 2. 找到模块
- 3. 拼接output
  - a. 依赖关系depTree
  - b. chunks and modules
  - c. 拼接
  - d. 输出

```
var depTree = {
      modules: {},
      modulesById: {},
      chunks: {},
      nextModuleId: 0,
      nextChunkId: 0,
      chunkModules: {}
   modules = {
      'F:\\example\\example.js': {
        id: 0,
        filename: 'F:\\example\\example.js',
No error
        name: '',
Syntax
        require: [],
        source: 'console.log(123456)',
        chunks: []
```

#### code-splitting

- 1. 代码分离类型
  - a. Entry 配置
  - b. CommonsChunkPlugin插件
  - Require.ensure

// react-router

// Vue-router

'orderDetail')

},'chooseProducts')

```
const chooseProducts = (location, cb) => require.ensure([], require => {
    cb(null, require('../Component/chooseProducts').default)
const orderDetail = resolve => require.ensure([], () =>
    resolve(require('../page/order/children/orderDetail')),
```

2. 动态加载语法

() => import('./Foo.vue')

## Q&A
